

# General Information

## Design Standard

The distinctive features of Yuken Standard products is as shown below.

Feature	Domestic Standard	Remarks
Port Tapping	Rc(=PT)	Taper Pipe Thread (ISO 7/1)
Port Tapping (Partial)	G(=PF)	Straight Pipe Thread (ISO 228/1)
Pressure Gauge Tapping	Rc(=PT)	Taper Pipe Thread (ISO 7/1)
Mounting Bolts	Metric	General Purpose Thread (ISO 261)
Mounting Dimensions	Metric	
Conduit Entry	G(=PF)	Straight Pipe Thread (ISO 228/1)
Solenoid Voltages AC/DC	Domestic voltage	Voltage and frequency change according to country
Frequency	50/60 Hz	
Electronic Amplifier Input Supply	Domestic voltage 50/60 Hz	
Graphic Symbol	ISO Standard	ISO 1219
Valve Port Size	Inch	

## Design Number

Yuken products have factory applied Design numbers, the key to which is as follows.

Example: 4222T68

42 22 T68

Major Design No. \_\_\_\_\_ Design No. for modified products in Taiwan

Minor Design No. \_\_\_\_\_ Omitted: Domestic standard

Design numbers are subject to change. But installation dimensions and specifications remain unchanged for variation in second digit of design numbers (Minor Design No.).

## Hydraulic Fluids

### Type of hydraulic fluids

- Petroleum base oil-Please use anti-wear type hydraulic oil or R & O (Rust and Oxidation inhibitor) type hydraulic oil equivalent to ISO VG 32 or 46. Do not use VG 68 hydraulic oils in winter; it will cause suction failure or cavitation.
- Fire resistant or other special fluids-Please consult with our sales engineers for your requirement.

### Fluid viscosity and temperature range

Please use hydraulic fluids in a range which satisfies the conditions of both viscosity and temperature (specified in table.)

Type of Components	Viscosity Range	Temperature Range
Piston Pumps	20 ~ 400 mm <sup>2</sup> /s	★1 0 ~ +60°
Vane Pumps	20 ~ 400 mm <sup>2</sup> /s	★1 0 ~ +70°
Pressure Control Valves	15 ~ 400 mm <sup>2</sup> /s	★2 -15 ~ +70°
Flow Control Valves	FG、FCG : 20 ~ 400 mm <sup>2</sup> /s Other : 15 ~ 400 mm <sup>2</sup> /s	-15 ~ +70°
Directional Control Valves	15 ~ 400 mm <sup>2</sup> /s	-15 ~ +70°
Proportional Electro-Hydraulic Control Valves	EDG、EBG : 15 ~ 400 mm <sup>2</sup> /s EFBG : 20 ~ 400 mm <sup>2</sup> /s EDFG、EDFHG、ECDFHG : 20 ~ 400 mm <sup>2</sup> /s	-15 ~ +70° 0 ~ +60°

★1. When starting the pumps at low speed, maximum viscosity is restricted. (see table above right).

★2. If the valve is provided with a vent restrictor (ex.: A-BSG-03), the viscosity range should be 15-200 mm<sup>2</sup>/s.

### Control of contamination

Contamination of the hydraulic fluids may cause any damage to the products or shorten the life of the products, therefore, please maintain the degree of contamination level lower than NAS Class Numbers as shown on the table 1 below

①The suction port line must have a reservoir type filter of 100 µm (150 mesh) and the filter should be installed minimum 50 mm higher than the bottom of the reservoir.

②The return line must have a line filter.

### Line type filter ratings

Type of Componetns	Line Type Filter
Pump's Suction Port	100µm
Circuit System	Piston Pumps: below 10µm E series components: below 20µm Other components: below 25µm

# General Information

## Limitation of general properties of fluids

General hydraulic fluid, new fluid contains water 50~80 ppm (0.005~0.008%), there would be water coming from components or air filter so the water become more. Water could cause the rust inside the components and bad lubrication; then result in worse fluid. We use Karl-Fischer method to test the water in the fluid (use the reagent to analyze the reaction in the water.) the sensitivity is 10 ppm. Please refer to table 4 & 5 for the limitation of particle and water contamination.

## Table 3 Replacement standards of fluid

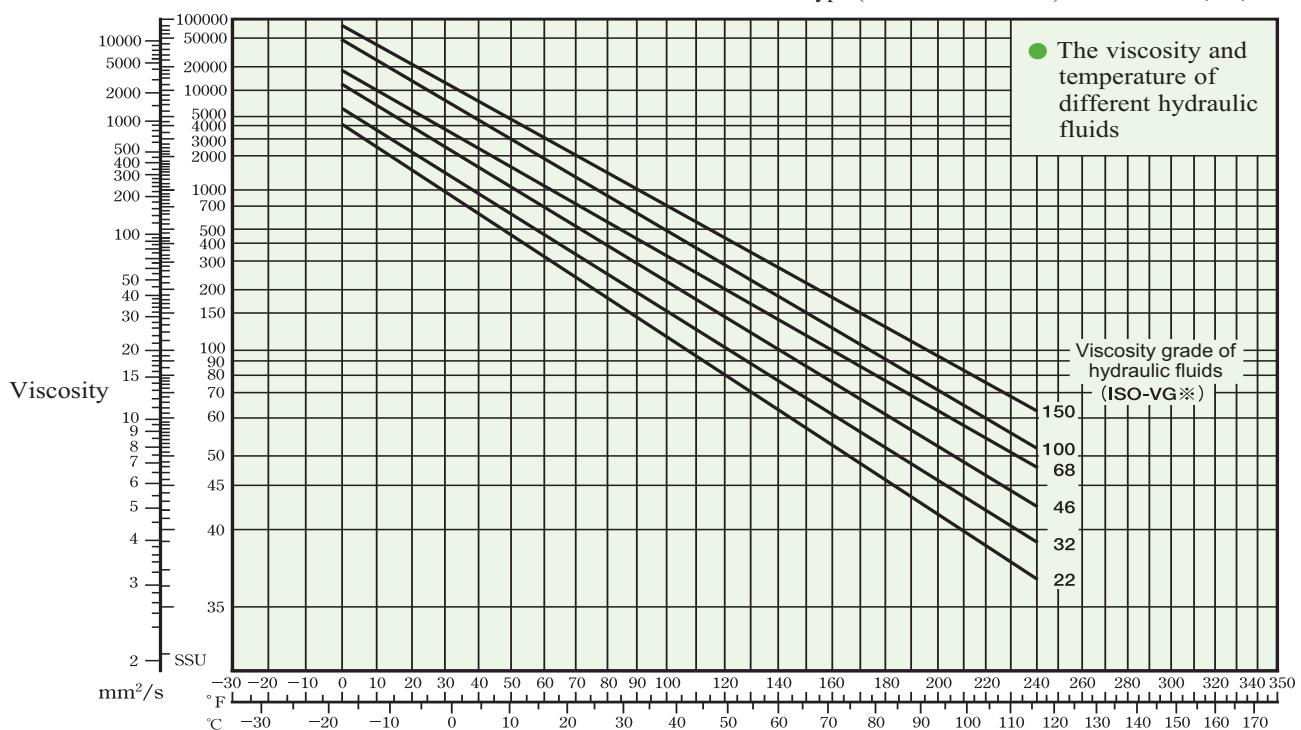

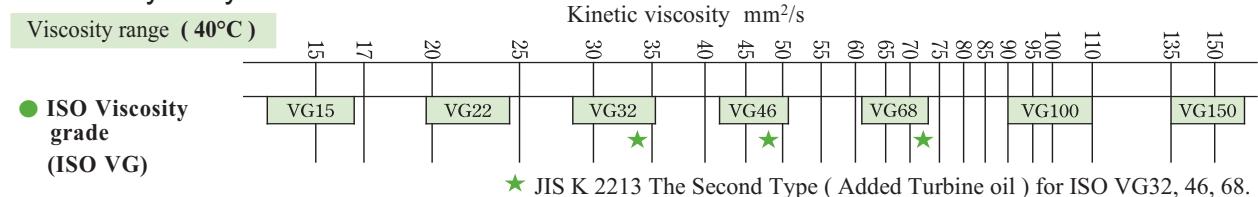

ITEM	FLUID	Petroleum base oil		Phosphate Easter
		standard	anti-wear	
Viscosity (40°C) mm <sup>2</sup> /s ★		± 10 %		± 10 %
PH ★ mg KOH/g	0.25	a ★	0.25	-
	b ★		± 40 %	

★ : Difference

★ : the kind of additive (a. non-Zinc, b. Zinc) Table 3 is the standards of replacing fluid, the details will differ from the suppliers. Besides the table, there would be some management items, please contact fluid manufacture for the details.

Ex.: the PH value of bad fluid index would be different from the kind of additives and the volume; the Phosphate Easter too.

## Viscosity of hydraulic fluids

## Table 4 The best contamination management standards

Type of components	Counting standards	
	JIS B 9933 (ISO 4406)	NAS
Servo Valves	18/16/13	7
Piston Valves	20/18/14	9
Proportional Valves	20/18/14	9
Components over 21MPa	20/18/14	9
Components 14~21MPa	21/19/15	10
Common Low Pressure Components	21/20/16	11

★ Reference for JIS B 9933(ISO 4406) and NAS.

## Table 5 Limit of water content

Conditions	Limit
Water mixed with the fluid so it become milky Replace immediately	To be replaced immediately.
Fluid in the system could return to the reservoir and the stopping period is short	500 ppm
The piping is longer and the fluid could not return completely	300 ppm
System (safety system) under long stopping period or the fluid is not moving and precision control system	200 ppm

# General Information

## Instructions for hydraulic pump

### 1. Mounting

When installing piston pumps the filling port should be positioned upwards. When PV2R Single and Double Vane Pumps are operated below 1200 r/min; we recommend the suction port upwards to suck oil easily.

### 2. Alignment of Shaft

Employ a flexible coupling whenever possible, and avoid any stress from bending or thrust. Maximum permissible misalignment is less than 0.1 mm. TIR (Total Indicator Reading) and maximum permissible misangular is less than 0.2°.

### 3. Suction Pressure

$$\star 1 \text{ kPa} = 0.01 \text{ kgf/cm}^2 = 7.5 \text{ mmHg}$$

Model		Suction Pressure Range		
		Petroleum base oils	Min	Max.
Piston Pumps	ARL1 AR*	-16.7 kPa	-	+ 50 kPa
Single Pumps	50T 150T	-20 kPa	-16 kPa	+ 140 kPa
PV2R Single Vane Pumps	PV2R1	-20 kPa	-16 kPa	+ 30 kPa
	PV2R2	-20 kPa		
PV2R Double Vane Pumps	PV2R3	-20 kPa	-16 kPa	+ 30 kPa
	PV2R4	-20 kPa		
PV2R Double Vane Pumps	PV2R12	-20 kPa	-16 kPa	+ 30 kPa
	PV2R13			
	PV2R23			
	PV2R24 (PV2R34)	-20 kPa		

- Make sure that the height of the pump suction port is within 1m from the oil level in the reservoir.
- Please follow the instructions of catalogue to choose suitable caliber of suction port pipes; otherwise, it might lead to dangerous cavitation. We suggest the suction port flow rate under 1 m/s.

★ For some displacement of pumps, the Min. suction pressure is restricted by the rotation speed. Please refer to Table 1.

● Table 1: The limitation of Min. suction pressure for specific displacement of hydraulic pumps.

The following hydraulic pumps with rotation speed 1700 r/min are restricted by the Min. suction pressure. (Min. suction pressure of other hydraulic pumps is -150 mmHg)

Model No.	Min. Suction Pressure kPa	
	1700 r/min Below	1700-1800 r/min
PV2R3-116	-20	0
PV2R4-237	-20	-13.3
PV2R3-3-3-76	-20	-6.7
PV2R3-3-3-94	-20	-6.7
PV2R3-3-116	-20	0
PV2R3-4-237	-20	-13.3
PV2R34-76-*	-20	-6.7
PV2R34-94-*	-20	-6.7
PV2R34-116-*	-20	0
PV2R34-116-237	-20	0

### 4. Instructions of Piping

- ① In case the pump is installed above the oil level, the suction piping and suction line filter should be located lower than the pump position to prevent air in the suction line.
- ② When using steel pipes for the suction or discharge ports, excessive load from the piping to the pump generates excessive noise. Whenever there is fear of excessive load, please use rubber hoses.

### 5. Drain Piping

Install drain piping according to the chart and ensure that pressure within the pump housing should be maintained at a normal pressure of less than 0.1 MPa (14.5 PSI) and surge pressure of less than 0.5 MPa (72.5 PSI). Length of piping should be less than 1 m, and the pipe end should be submerged in oil.

Recommended Drain Piping Size:

Model	Piping Fitting Size	Internal Dia. of Pipe
ARL1, AR*	3/8 (Internal Dia. more than Ø8.5)	more than Ø10

### 6. Hydraulic Pumps Starting

- Before first starting, fill pump case with clean operating oil via the filling port.
- In order to avoid air blockage when starting pumps after long time shut down, to set up air bleeding valve on the discharge sides in advance or to loose discharge piping connection area for bleeding the air in the pipes. To the best of pumps' starting with no loading.
- When temperature is under 15°C in winter or viscosity is 200~400 mm<sup>2</sup>/s (1000SSU~1800SSU), please refer to the following instructions to start pumps in order to make better internal lubrication, and it will help the suction of the pump and extend the pump's life.
- Starting instructions: to start running pumps for 5 seconds, and then stop it for 10 seconds. To repeat this process 10 times, and then keep it running.

● Table 2: Max.viscosity list of starting at low rotation speed

Model	Rotation speed of starting r/min	Max. viscosity mm <sup>2</sup> /s
PV2R1	750	100
PV2R12		
PV2R13	950	200
PV2R14

PV2R2		
PV2R23	950	200
PV2R24		

# HYDRAULIC PUMPS

## ARL1 Series Variable Piston Pumps

Max. Pressure 7 MPa

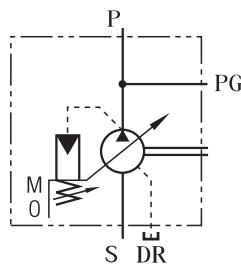

- High Efficiency: With long-term reliable technology of A & AR series piston pumps, Yuken designs high efficiency pressure control piston pumps.
- Smaller in Size and Lighter in Mass: ARL1 is 40% smaller than A series and 30% lighter than A series.
- Low Noise: Pressure 7 MPa, speed 1500 r/min, one meter horizontally away from pump head cover, the noise level is as low as 55 dB(A) standards for ARL1-16 at the full cut-off.
- There is no flow adjustment screw in ARL1 series, please choose it according to the displacement.

### Model Number Designation

## AML1 Series Motor-Pumps

Max. Pressure 7 MPa

### Graphic Symbol

- ARL1 series Variable Piston Pumps with the characteristic, high efficiency, beautiful, light and low noise combined with ML1 series Electric Motors to make compact Power Unit more valuable.
- Smaller in size and lighter in mass. Electric Motors with light and beautiful aluminum bodies to be combined with ARL1, the size is 40% smaller and the mass is 20% lighter than ARM series.
- Low noise: low noise electric motors combined with low noise ARL1 hydraulic pumps; therefore, the working noise of AML1 series is very low.
- ARL1 is flow rate fixed pumps with non-adjustable flow control. Please choose AML1 series according to the displacement.

### Applications :

- NC Lathes
- MC machines
- High efficiency special machines

## ML1 Series Electric Pumps

- Compact ML1 electric motors with high standard silicon steel have high efficiency than the ordinary electric motors and the total length is 40-50mm shorter than the standard electric motors.
- ML1 electric motors are made by light and beautiful aluminum pressed bodies. The mass is 16-35% lighter than the standard electric motors.
- Low noise: Precision-balanced adjustment, low vibration, and low noise.

#### AR※-FR01※-22

## Single Vane Pumps

Max. Pressure 7 MPa

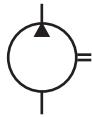

These pumps are widely used as a source of hydraulic power, owing to their features of stable performance and robust construction with a wide range of displacement.

## PV2R Series Single Vane Pumps Max. Pressure 21 MPa

### Graphic Symbol

- The pumps with high pressure and high quality, have been developed especially for low noise operation.
- The pumps can be used on various applications including injection moulding machines and machine tools...etc, with output range: 5.8~237 cm<sup>3</sup>/rev.
- The pump cartridge kit is assembled by screws, so it is easy to assemble and maintain.

\*1. For starting at low speed of shaft rotation, the maximum viscosity is limited. Please refer to page 8 (Table 2) for details.

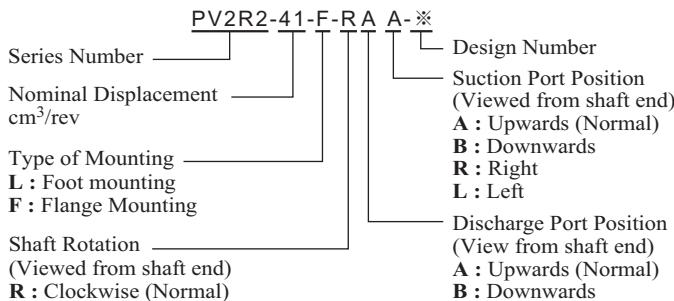

\*2. When operating with a shaft speed exceeding 1700rpm, the suction pressure is restricted. Please refer to page 8 (Table 1) for details.

\*3. When pressure is over 16 MPa (160 kgf/cm<sup>2</sup>), raise the speed of shaft rotation to more than 1450 rpm.

● Anti-wear type petroleum hydraulic fluids are recommended to use with these pumps.

● For pressure - output flow & input power characteristics, please refer to page 28-34.

This technical drawing shows a cross-sectional view of a mechanical part. Key dimensions include a total width of 354, a central vertical slot width of 110, a side slot width of 135, and a top slot width of 92. The height of the main body is 76, and there is a 56 gap between the top surface and a horizontal line. Feature details include a central circular hole with a diameter of  $\varnothing 38.1$  and a tolerance of  $-0.05$ , a side slot with a diameter of  $\varnothing 42.36$  and a tolerance of  $-0.18$ , and a bottom slot with a diameter of  $\varnothing 152.4$  and a tolerance of  $-0.05$ . A note indicates a total length of 217. On the left, a dimension of 115 is shown from the center of a slot to the left edge.

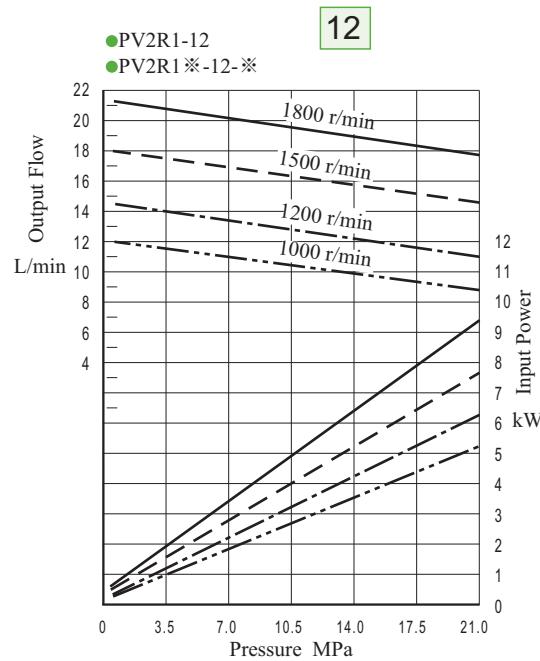

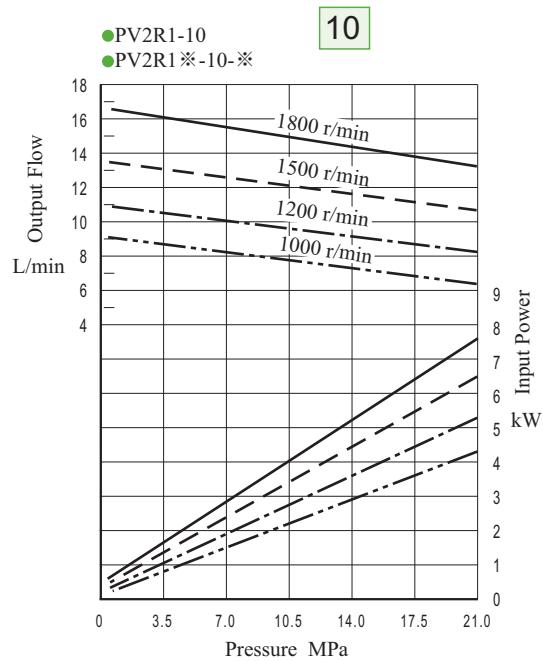

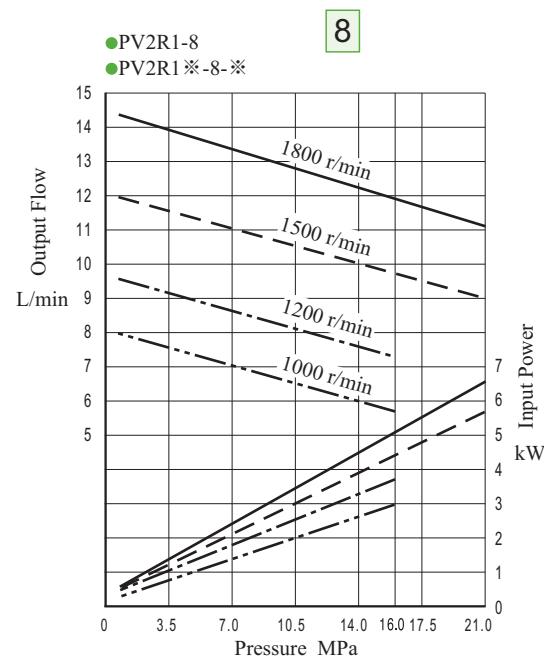

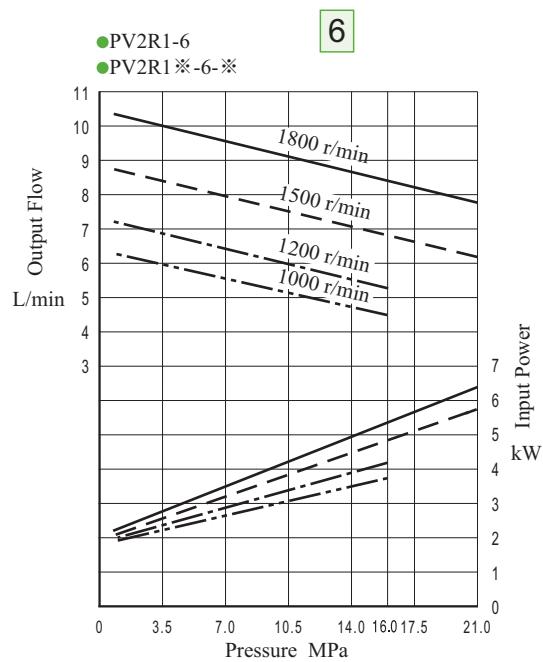

The diagram shows a circular flange mounting plate with various dimensions and port positions:

- Outer Diameter:** 273
- Inner Hole Diameter:** 228.6
- Port Position:** Port Position A (top), Port Position B (bottom), Port Position L (left), Port Position R (right).
- Radius:** R 22
- Spots:** 4 Places (Rear Side)

A note specifies: **\* Discharge port of flange mtg. type: only (A) port position**.

# PV2R Series Double Vane Pumps

**Max. Pressure 21 MPa**

- These double pumps consist of two PV2R series single pumps combined in tandem within a single housing and driven by a common shaft.
- Fluid delivered from the two separate ports can be either supplied to separate or common circuits.

237	237	★2 17.5 (178)

★1.When small volume pump pressure above 16 MPa (160kgf/cm<sup>2</sup>), shaft rotation speed must raise more than 1450rpm.

★2.When you choose Nominal Displacement, the Maximum operation pressure is limited at 14/16/17.5 MPa.

### Limit of the Input Power

PV2R12 series, the sum of the input power to small volume pump and large volume pump is limited against the speed of shaft rotation as follows:

### Shaft Speed Range

Model Numbers	Shaft Speed Range r/min	
	★3 Maximum	★4 Minimum
PV2R12	1800	750
PV2R13	1800	750
PV2R14	1800	750
PV2R23	1800	600
PV2R24	1800	600
PV2R34	1800	600

★3.The minimum suction pressure is limited in accordance with the speed. Please refer to page 8 (Table 1) for details.

★4.The Limit of Maximum Viscosity when starting at low speed of shaft rotation. Please refer to page 8 (Table 2) for details.

## Model Number Designation

F - F5 - 06 X - A - 10T

Type of Hydraulic Fluids  
No : Standard  
F : For Phosphate Ester Fluids  
Use Only  
Series Number  
Flange Size

Design No.  
Type of Connection  
A : Threaded Connection  
B : For Pipe Socket Welding  
Special Spec.  
No : Standard  
X : Special Bolts

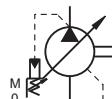

W : Piping Size Smaller than standard  
V : Piping Size Smaller than W

- Note:  
1.Flange kits include bolts and o-ring as the attachment.  
2.Material of O-Ring is described below.  
F5-※-※-10T NBR(Buna N) HS 90  
F-F5-※-※-10T FPM(Viton) HS 90  
3.The strength of bolt is 12.9T

## Tightening Torque for Bolts

Bolt Size	Tightening Torque N·m (kgf·m)	Recommendation	Tolerance
M8	34.3 (3.5)		
M10	67.2 (6.9)		
M12	115.7 (11.8)		
M16	281.5 (28.7)		±10%

Tightening Torque above is applicable to pressure line only.

**SVPF Series Variable Vane Pump****Max. Pressure 7 MPa****Graphic Symbol****Piping for Drain**

The piping of the drain port should not be set over 0.05 MPa of the body. The length of Piping should not be over 1 m and please do not mix the return piping with other solenoid valves. The end of the piping should be put into the fluid. Recommend the size of the drain piping is as follows:

The fitting of the piping: 1/4 (internal diameter Ø6.6 plus)  
The internal diameter of the piping: Ø7 plus

This pump is quiet, small, high efficiency, longevity, and quick response, the pressure and flow of this pump are adjustable and it is suitable for small and light equipment such as machine tools and shoes machine.

**Model Number Designation**

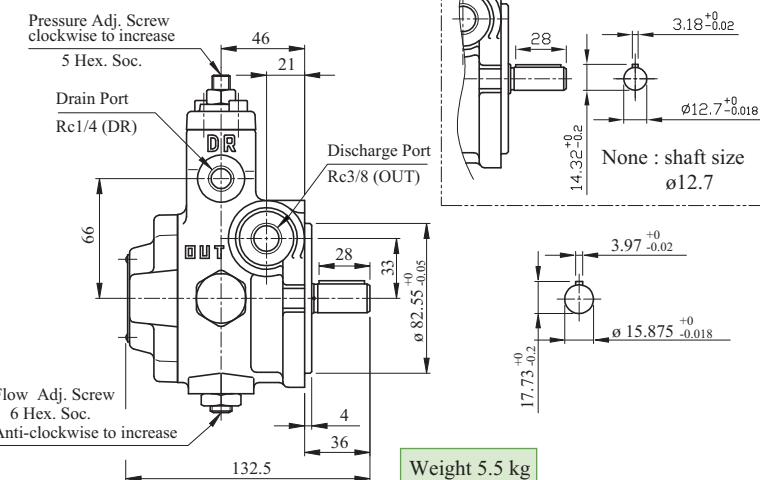

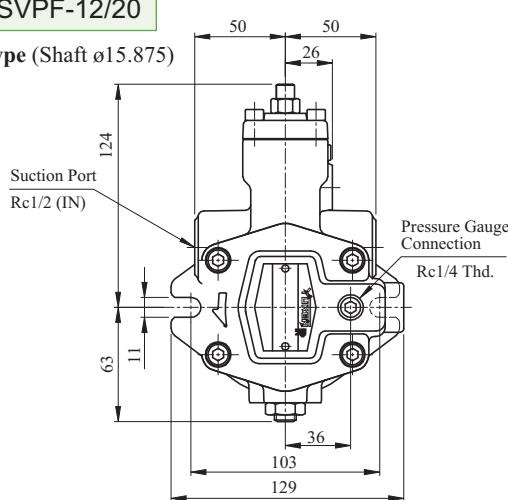

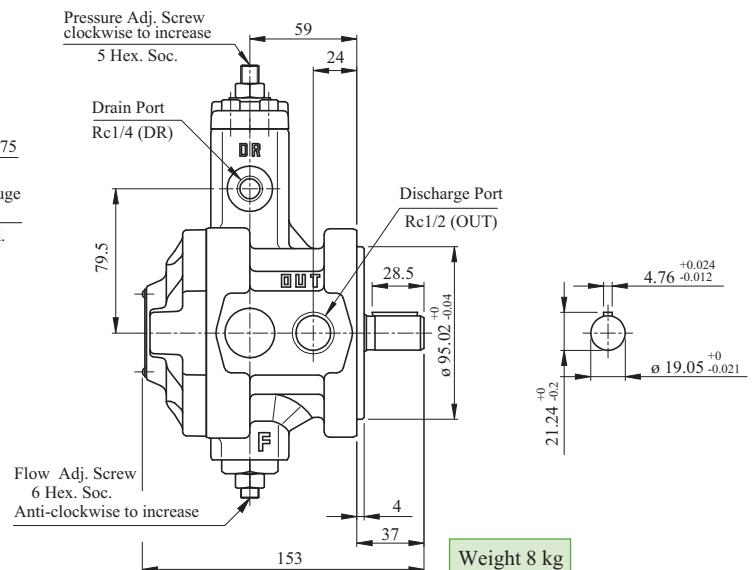

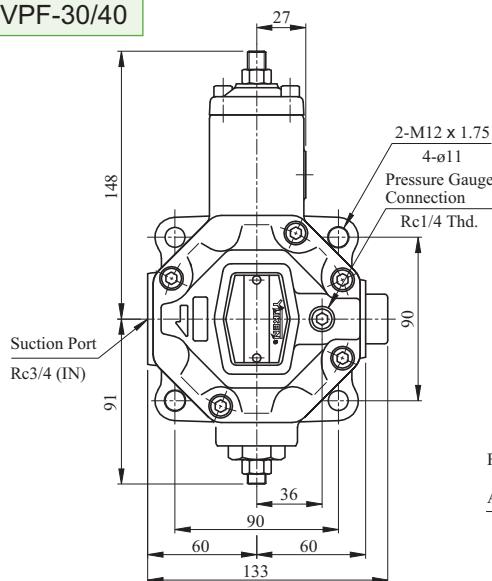

SVPF	-12	-70	-B	-20
Series number	Geometric Displacement. L/min (1800 rpm)	Max. Operating Pressure MPa (kgf/cm <sup>2</sup> )	Shaft size (mm)	Design number
SVPF	12	20 : 2.0 ( 20 kgf/cm <sup>2</sup> )	B : shaft size ø15.875 (suggestion)	20
	20	35 : 3.5 ( 36 kgf/cm <sup>2</sup> )	None : shaft size ø12.7	
	30	55 : 5.5 ( 56 kgf/cm <sup>2</sup> )	None : ø19.05 mm	
	40	70 : 7.0 ( 71 kgf/cm <sup>2</sup> )		

**Setting of the pressure and displacement**

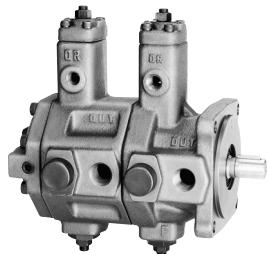

The flow of the this pump is set at the Max. and the pressure of this pump is set at the lowest while the pump dispatched. Please reset the pressure and flow according to real working condition after receiving the pump.

■ Please refer to page 43 for other characteristics.

■ Please contact sales for the spline type, coupling and shaft in details.

**SVPF-12/20****B Type (Shaft ø15.875)****SVPF-30/40**

## SVPDF Series Double Variable Vane Pump Max. Pressure 7 MPa

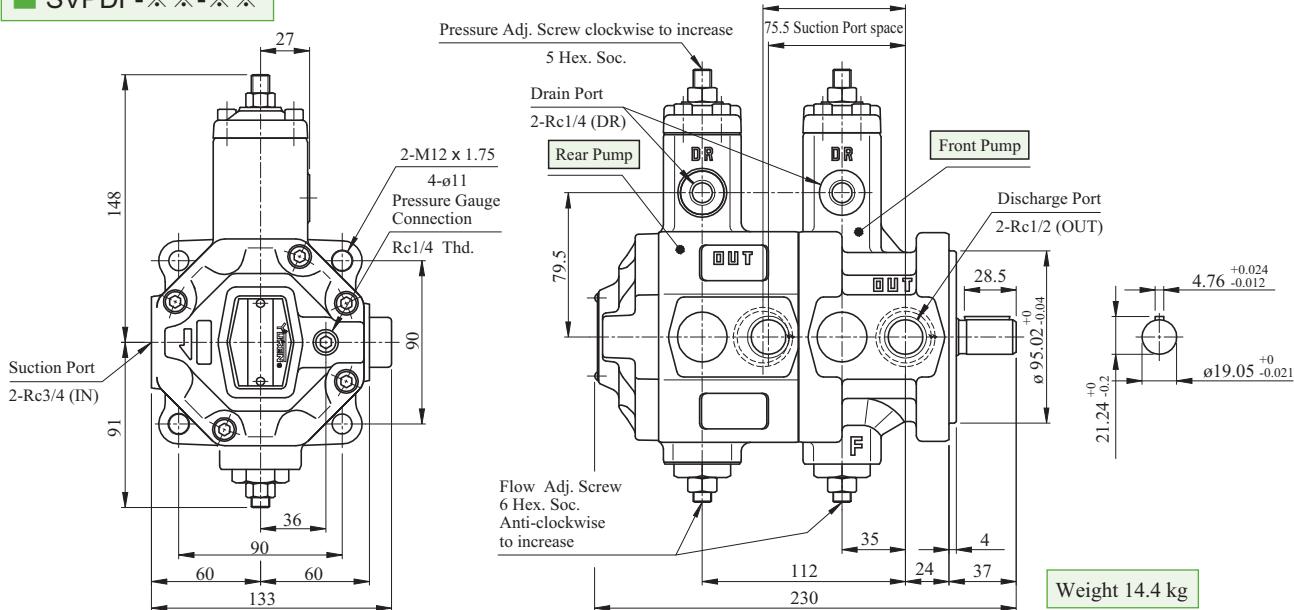

This pump is quiet, small, high efficiency, longevity, and quick response. The double variable vane pump can save the installing space, the suction port and discharge port is separate.

### ■ Model Number Designation

SVPDF	-30	70	-30	70	-20
Series Number	Front Pump Geometric Displacement L/min (1800 rpm)	Front Pump Max. Operating Pressure MPa (kgf/cm²)	Rear Pump Geometric Displacement L/min (1800 rpm)	Rear Pump Max. Operating Pressure MPa (kgf/cm²)	Design Number
SVPDF	30	20 : 2.0 ( 20 kgf/cm² )	30	20 : 20 ( 20 kgf/cm² )	20
		35 : 3.5 ( 36 kgf/cm² )		35 : 35 ( 36 kgf/cm² )	
		55 : 5.5 ( 56 kgf/cm² )		55 : 55 ( 56 kgf/cm² )	
	40	70 : 7.0 ( 71 kgf/cm² )	40	70 : 70 ( 71 kgf/cm² )	

■ Please refer to page 42 for the piping of the drain port, the setting of the pressure and displacement

### ■ SVPDF-※※-※※

### ■ Characteristics : The following characteristics are based on fluid viscosity 46 mm²/s (ISO VG-46 40°C)
